1. The collaborative brain dump

Recalling new learning is powerful for long-term memory. Create a brain dump space to help students retain new information.

Click here to get the template

2. The teacher white board

Use Jamboard as a super-powered white board remotely and face to face. Write. Share your screen. Then give students a link to review later.

Create a new jam to do this

3. The graphic organizer

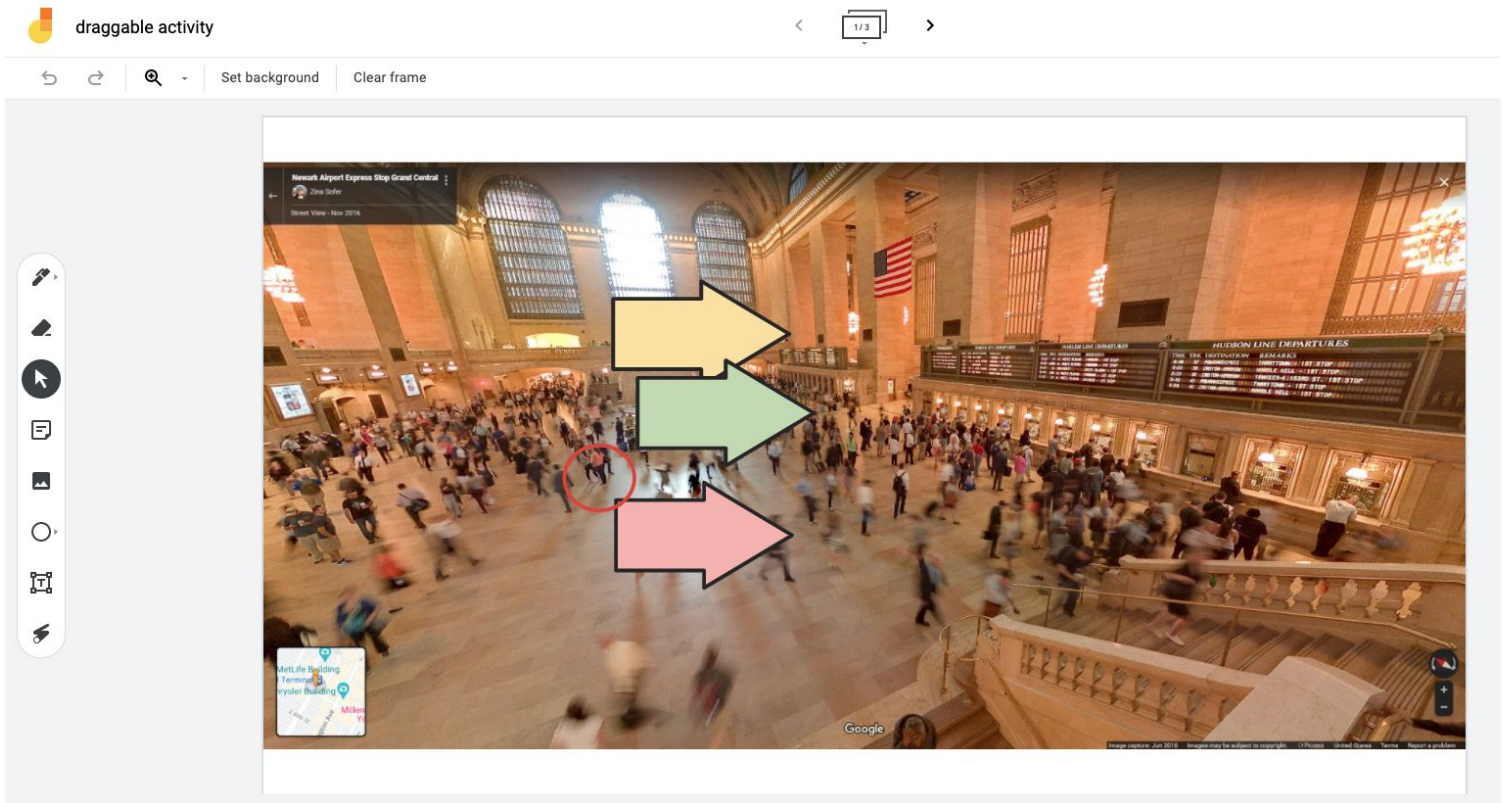

Guide students through a line of thinking. Add a graphic organizer as a Jamboard background. Then let students complete it.
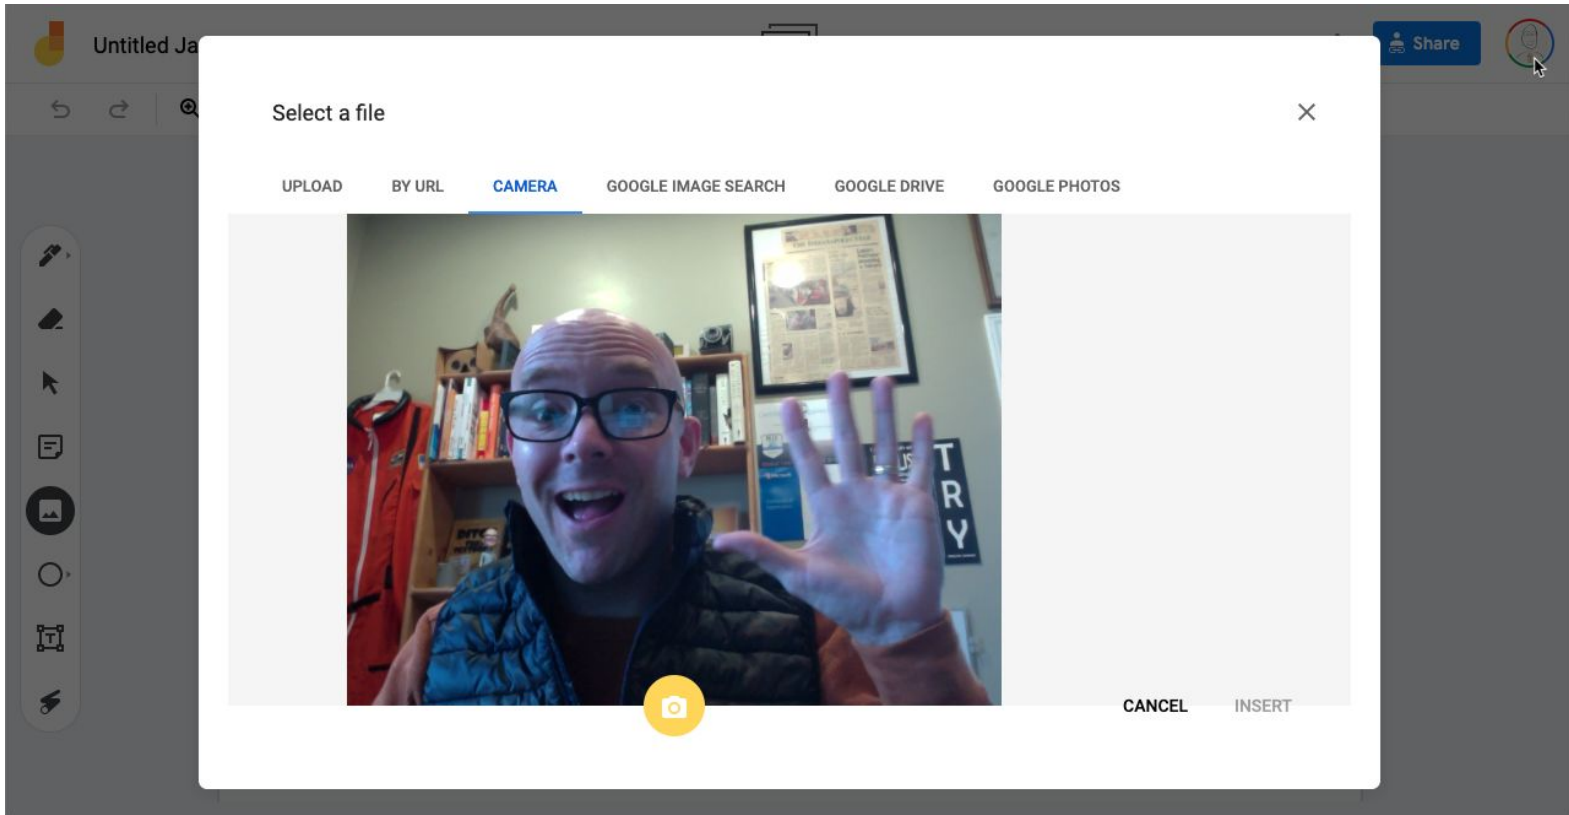

4. The image annotation

Drag and drop arrows, circles, and more on an image. Then, students add text to explain their answers. It's very visual, brain-friendly learning!

5. Snap a picture

Use your webcam to add a picture to Jamboard. Then annotate. It's a fun, easy way to make photo comic strips and to personalize learning.

Create a new jam to do this

6. Access version history

See revisions to a jam — and who made them — in version history. Just use the three dots menu button next to share.

Use an existing jam to do this

7. Use animated GIFs.

Draggable animated GIF images make interactive activities fun. Plus, you can make animated GIF backgrounds for your jams!

8. Make a scratch-off

Scratch-offs let students reveal info in a fun, hands-on way. Just use the marker tool to color in the scratch-off, and students erase to

9. Add Google Drive files.

Use the mobile app to add images of docs, slides, and more to your jams. Then you can annotate on them and move them around!
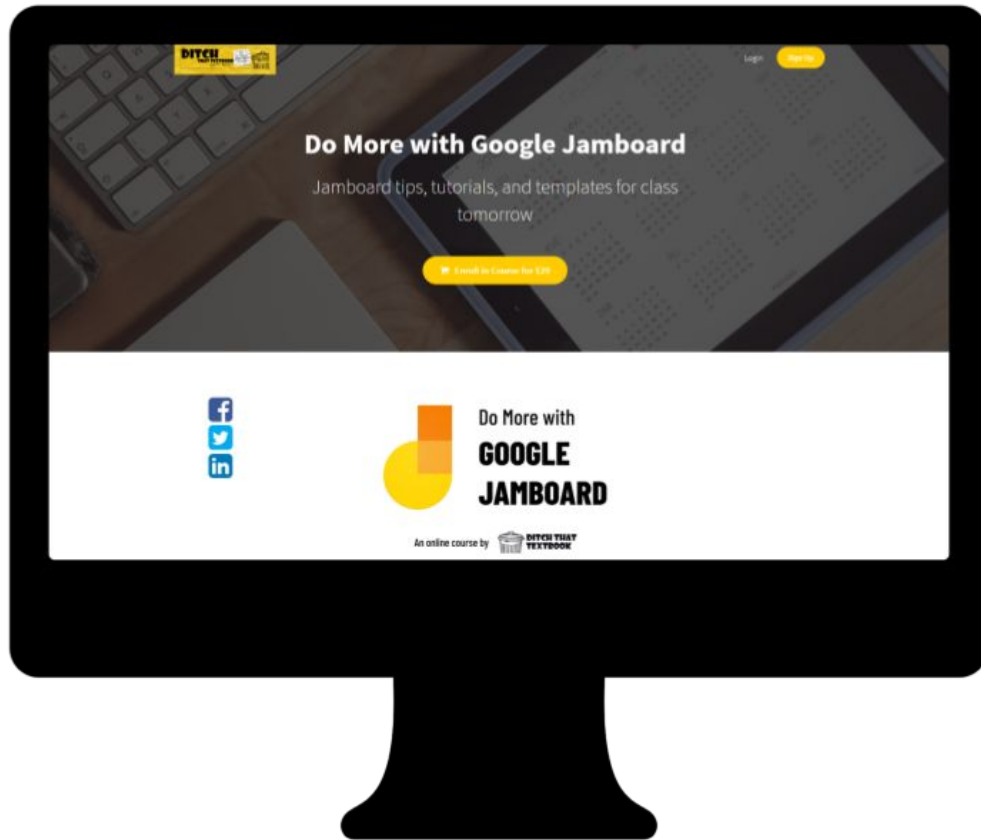

App (iOS)

App (Android)

10. Hide items in an object.

Create something to hide sticky notes in with the marker tool. Marker is always on top! Color in a space and hide things behind it.
